Hi,

Does anyone know how to decide the default paramter value LIMIT that is used in MAP_SET so that if I use it that will generate the same result as the one that I don't use it. For example, how to find 'limit' so that the following two commands will generate the same results.

```
MAP_SET, 60, 0, /ORTHO, /GRID, /CONTINENT
and
MAP_SET, 60, 0, /ORTHO, /GRID, /CONTINENT, $
    LIMIT=[latmin, lonmin, latmax, lonmax]
```

Thanks.

Gary
