
Subject: Bus error in IDL 6.3 on Mac OS X

Hello,

I am currently using IDL6.2 on a Mac OSX 10.4.11 and for long I have been using programs with the tv command without problems, but now when I try to run them, IDL crashes and exits with a "bus error". I looked on Google for some info about this and I came across a website describing "Bus error in IDL 6.3 on Mac OS X". After reading it I checked the issue of my display variable. I only have one monitor and the display variable is :0.0 (and I am still using IDL 6.2)

This behavior started on friday (2/13/09) after I installed the following software updates:

- Java for Mac OS X 10.4, Release 8 v1.0
- Security Update 2009-001 (PowerPC) v1.0

Could these updates have change something affecting my IDL6.2 installation? Has somebody else experience this? Does anybody knows if there is a easy way to fix this?

Thanks,

Raul
