Subject: Why the font is smaller in the IDLgrBuffer ?
Posted by natha on Fri, 27 Feb 2009 15:50:53 GMT

I've a simple question...

I've an IDLgrView with some IDLgrTexts using a certain IDLgrFont and I
convert all of that to an IDLgrImage using an IDLgrBuffer.
The Buffer has the same dimensions of the View and I use the Draw and
Read methods.

On the result, the font of all texts is modified and smaller than the
original.
Why ?
How can I do to preserve the same font size ?

Thanks,
Bernat
