You need to resolve these:

        libidl_dml.so => not found
        libidl.so.7.0 => not found
        libidl_ops.so.7.0 => not found
        libidl_ipcclient.so.7.0 => not found
        libXp.so.6 => not found

and you need to make certain you are using 32-bit libraries (gtk and
others). In particular, you should take the 32-bit version of this
JRE:

http://java.sun.com/products/archive/j2se/5.0_11/index.html

and install it (install is as the idl/idlde/jre directory

Other than that, no ideas here because I'm still trying to get an
evaluation version of it up and running!
