Folks

I have got a problem and couldn't solve it. Let I have an array:
arr=x,y and x is location indicator and y is my function. My data is something like this:

x=1,2,3,4,.....,999,1000

y=1,2,3,5,5,5,....,5,5,200

And size(x)=size(y). I want to interpolate y to remove the 5's to take continues value for each location (x). I used congrid and interpolate function but still doesn't work. Any help?

Cheers
