Well, then, you need to try ruby. I started using it a couple years ago to properly grok
object-oriented programming. The "I've got a new girlfriend" infatuation period has passed
and the real work has begun... I wouldn't call it a marriage just yet, but the invites for
the engagement party have been ordered. :o)

ruby is just oh so much fun to use. (Among other things, I use it to write my boilerplate
Fortran95/2003 and IDL code for me)

Anyway.....

cheers,

paulv
