You can do that with _EXTRA and CREATE_STRUCT:

```
; cut here, keytest.pro
pro keytest, key1=key1, key2=key2, _extra=ex
help, key1, key2
end
; cut here
```

```
IDL> keytest
% Compiled module: KEYTEST.
KEY1      UNDEFINED = <Undefined>
KEY2      UNDEFINED = <Undefined>
IDL> keytest, _extra=create_struct('key1', 1, 'key2', 2)
KEY1      INT      =      1
KEY2      INT      =      2
IDL>
```
