Hello

I never used IDL with JAVA. I wish to use the TurboReg (<http://bigwww.epfl.ch/thevenaz/turboreg/>), It is written as a JAVA plugin for ImageJ.

I wonder if I can run it from IDL in the simplest automatic format:  
input are image A and image B (source and target), output is image A  
after the registration.

Any ideas?

Thanks,  
Eran
