Subject: netCDF Read/Write Variable

---

Folks,

Rather than fooling around with this for an hour while I have better things to do, I thought I would just ask.

Would it be possible to read a single variable out of an netCDF file, massage it a bit, and then stick it back into the same file? Presume that I (a) don't change the variable dimensions or type, and (b) do change the variable dimensions or type.

Thanks,

David
