Hello all.

My apologies if this is a dumb question.

I've written a rather elaborate widget program, with a display and all the knobs and dials anyone could wish for. What I'd like to do is make an avi or mpeg where one could see the plots in the display change as the sliders etc. move. Going from a tiff or jpeg to a movie is not the problem. Its not clear to me how to write the whole widget image, (if that's the word) to a tiff or jpeg continuously as the sliders etc. are moved...

If anyone has any advice I'd appreciate it greatly. I'm really under the gun on this one.

Thanks,

Mark
