anyone have a good image display function that can handle
log axis?

I have a huge image to display, so other routines just don't work
(contour takes several thousand years to plot for instance), so it
has to be an image. But I need to plot the y-axis as a log function.

Of course, I could roll my own - probably transform the image
before calling a display routine, but i was hoping for a /ylog keyword
in a function.

cheers,
bob
