How does one increase the amount of code space to avoid this:

```
WAVE> .run pf3dr
```

```
% Compiled module: PLOTSET.
```

```
% Compiled module: DEVINIT.
```

```
% Compiled module: SHOWTITLE.
```

```
% Compiled module: LOAD3DR.
```

```
% Compiled module: GETCR.
```

```
% Compiled module: GETSL.
```

```
% Compiled module: GETCORS.
```

```
% Compiled module: DRAWARC.
```

```
        contour,tt,zx,zz,xrange=[0,maxx],$  
                ^
```

```
% Program code area full.
```

```
% 2 Compilation errors in module $MAIN$.
```

```
WAVE>
```

```
WAVE> help
```

```
% At $MAIN$ .
```

```
Code area used: 99.98% (16380/16384), Data area used: 13.26% (1326/10000)
```

```
# local variables (including 0 parameters): 62/209
```

```
# common symbols: 36/36
```

```
:  
:  
:
```

Doesn't show up too prominently in the indices for the manuals...
