Hi people,

We can run bulces on the LINUX terminal using & \$ after each line.  
For example:

```
FOR i=0, 5 DO BEGIN & $  
  FOR j=0, 2 DO BEGIN & $  
    PRINT, i & $  
    PRINT, j & $  
  ENDFOR & $  
ENDFOR
```

Today a friend tells me another way to do that:

```
.R  
FOR i=0, 5 DO BEGIN  
  FOR j=0, 2 DO BEGIN  
    PRINT, i  
    PRINT, j  
  ENDFOR  
ENDFOR  
END
```

Cheers,

llo
