Dear all,

I'm trying to make plots with the post script device, and am trying to increase the size of my psym=3 circular points to something that is actually visible when saved as a .ps, but it doesn't seem to have any effect. Can anyone see why from the below code? :

```
FOR i=0,a-1 DO BEGIN
```

```
    !P.MULTI=0
```

```
    SET_PLOT,'PS'
```

```
    DEVICE,/ENCAPSULATED,FILENAME=string(filefolder)+'/' + string  
(FORMAT='(I0)',ensarray[1,0,i])+'.ps',/color,bits_per_pixel= 8  
    loadct,13
```

```
    plot,ensarray[0,*,i],ensarray[3,*,i],
```

```
$
```

```
    psym=3,yrange=[min(ensarray[3,*,i]),max(ensarray  
[3,*,i])],color=0,symsize=10.0,$
```

```
    xtitle='HJD - 2450000',$
```

```
    ytitle='dMag',$
```

```
    title=' "Intrinsic Photometric Variability" of Star '+string
```

```
(FORMAT='(I0)',ensarray[1,0,i]),$
```

```
    YSTYLE=8
```

```
    AXIS,yaxis=1,yrange=[min(nofailarray[1,*,*]),max(nofailarray  
[1,*,*])],/SAVE,ytitle='Airmass' ;Plots the right axis
```

```
    oplot,nofailarray[0,*,0],nofailarray[1,*,0],psym =  
3,color=120,LINESTYLE=3
```

```
ENDFOR
```
