See the following link: <http://idldoc.idldev.com/>

This program makes easy the documentation of any kind of library or application written in IDL.

I found it today and it's so easy to use and the results are so nice.

Look at examples:

<http://michaelgalloy.com/demos/>

<http://astronomy.sussex.ac.uk/~anthony/idldoc/index.html>

The program parses your packages and makes a HTML documentation showing all the information. You can do your own template.
