Hey all,

I just wanted to let you all know that documentation is being written
to deal with installation difficulties that have arisen with the
release of several recent Linux operating systems. The focus at
moment is on Fedora 10, Ubuntu 8.10, and openSUSE 11 covering both 32-
bit and 64-bit installations. Feel free to send me any information
that you would like to provide pertaining to problems and solutions
during your Linux installations. You can email me directly at

blemire@ittvis.com

and I will incorporate your information into the documents as quickly
as possible. I hope that provides everyone with a bit of
encouragement and I look forward to all of your feedback during this
process.

Best Regards,

Brandon Lemire
