Hi Jean,

> BUT (of course), I still get the same error message if I type IDLDE
> exec: 617: /usr/local/itt/idl708/bin/bin.linux.x86/idl: not found

The same for me...

> Do you have any idea what else needs to be changed??

no... :-(

From what I understood, the actual script that runs to start IDL is
located here by default:
/usr/local/itt/idl/bin/idl
what we did is to find a workaround so that the variable ARCH is set
to .x86_64 and IDL 64bit version is run.
but there is still a problem with the 32bit IDL version that idlde is
using in some way...

Regards,

Jérôme
