Hi Jean,

I had exactly the same problem I think and I solved it using the trick mentioned here:

<https://lists.ubuntu.com/archives/ubuntu-users/2008-October/162350.html>

What I did:

Edit a one line file:

uname -m

save it as: arch

give it execution rights: `chmod 755 arch`

copy it to: `/bin/arch` not(anywhere else)

then type: `idl`

and:

IDL Version 7.0.8 (linux x86_64 m64). (c) 2009, ITT Visual Information
Solutions
IDL>

;-)

Hope it helps,

Jérôme
