Subject: counting elements in files

View Forum Message <> Reply to Message

I have a file with a bunch of numbers stored in it, formatted. It looks
something like this:

2555 3456 4567 5678 6789 7890
2345 6788 3445 6778 8899 9900
..
..
..

I am having trouble finding a procedure that will count the number of
elements in this file, so that when I create an array into which to read
this file, I will know what size to make the array.
Any suggestions?
