Hi this is Nitin, I am a Research Scholar, and i am facing problem during creation of DEM from geoeye pan data(I am using ENVI 4.6). When i run the process in lower level(5th level), process runs smoothly and result come out. but when i run the process in Maximum level(8th) at the end of the process a error appears as "Array dimension is must be greater than 0" will you suggest me, why this kind of error is occurring, is it due to heavy data size.
