Hi,

i am new in idl-envi world. I work on a old idl script.

This script run perfectly with the idl command line and i try to create a "sav" file for use it in runtime mode.

But i launch resolv\_all command after compiling my script i have the error "Attempt to call undefined procedure/function:

'ADAPT FILT EVENT'." See in the end of this message.

I have no function or procedure in my source named "ADAPT\_FILT\_EVENT" and there are no file in itt(idl/envi) directory with this name.

Someone have an idea on this error?

thanks in advance

IDL> .compile batch\_calib\_one\_file\_omega

% Compiled module: CALIB\_ONE\_FILE\_OMEGA.

% Compiled module: BATCH\_CALIB\_ONE\_FILE\_OMEGA.

IDL> resolve all

% Attempt to call undefined procedure/function: 'ADAPT\_FILT\_EVENT'.

% Error occurred at: RESOLVE\_ALL\_BODY

% RESOLVE\_ALL

% \$MAIN\$

% Execution halted at: \$MAIN\$

IDL>
