Hi Everyone,

Im wanting to do a bit of head tracking with IDL and FreeTrack (<http://www.free-track.net/english/>). I believe you can read the positioning data from FT through a DLL however Im completely new to them and would like some help on how to use CALL_EXTERNAL with the DLL... if thats even the correct method to use???

FT provide bit of a SDK for C, Delphi and Matlab so Im hoping it is possible to connect to through IDL.

Cheers

Jye
