I am pleased to announce that IDL 7.1 is now available to download from the ITT VIS website. IDL 7.1 expands on the modernization introduced in the IDL 7.0 Workbench with new features like the Tool Palette, greater control over the interactive iTools visualizations, the ability to open many file types without writing any code, and even IDL command line mode for Windows. Our goal is make IDL even easier to use whether you're an experienced or new user.

Enjoy,

Bill Okubo, IDL Product Manager
