Subject: print statements not working with dicom series uids? Posted by justin.mikell on Sun, 17 May 2009 19:30:51 GMT View Forum Message <> Reply to Message

I use IDL 7.0 on windows XP.

When I execute the program, IDL chooses not to print certain statements.

All the suspect print statements are trying to print a dicom series uid string.

However, when I place a breakpoint and then step through the statement it prints to screen.
