Since I've been doing these blended images a LOT lately, I decided to update these pages just now. There is now a link to a simple BlendImage program that can do an alpha blending of any two 24-bit images.

<http://www.dfanning.com/programs/blendimage.pro>

If you don't have 24-bit images, you can do what I did to create the example on the web page. I simply took my 8-bit MODIS images and displayed them in IDL graphics windows with their respective color tables. Then I used TVREAD to create the foreground and background 24-bit images I wanted to blend with BlendImage. You can find the details at the end of this article:

http://www.dfanning.com/color_tips/color_overlay.html

Cheers,

David
