Hi people,

I've 2 IDLgrImages into an IDLgrModel and I want to rotate the images 30 degrees.

I tried to use the IDLgrModel::Rotate method and I did not succeed with the rotation.

I tried a lot of combinations:

model->rotate, [0,0,0], 30

model->rotate, [1,0,0], 30

etc..

Why the images don't rotate? grgrggrrrr ....

How to do that ?

Thanks in advance,  
nata
