Does anybody know how to reliably do color filled contours of data defined on a TRANSFORMED grid (i.e. with a transformation defined with two arrays x and y, something like contour,p,x,y) ?

I didn't find polycontour satisfying with transformed grids, image_cont works only for nontransformed grids, so the only thing I have so far is a shade_surf,p,x,y,ax=90,az=0, which is nice, but still not the real McCoy.

Any ideas would be appreciated.
