Dear all,

I'm doing an eps graph and I'm using polyfill to fill the area between two lines. However I would like the area to be gray transparent, so I can still see what's below the filled part. How can I do?

I'm using this simple line, tried the keyword transparent but it seems not to be my case

```
polyfill,[6000,6250,6250,6000],[1.215,1.215,1.406,1.406]
```

Thanks!

M.
