Hi all,

I'm trying to read a very simple file with very basic commands, but it reads the wrong values for the last variable (d2): readf does not see it are negative values and reads only the last five digits. The first five items it reads OK. I guess I'm making a very trivial mistake here, but I don't see it. Anyone having a clearer mind than me?

Thanks!

Mark

```
sum1 = 0.0
sum2 = 0.0
sum3 = 0.0
sum4 = 0.0
count = 0
dummy1=""
openr, unit, /get_lun, 'sunny_days.fits'
while ~eof(unit) do begin
    readf, unit, format='(A8,F,F,F,F)', dummy1, dummy2, A, beta, d1,
d2
    help, dummy1, dummy2, A, beta, d1, d2
    sum1 += A
    sum2 += beta
    sum3 += d1
    sum4 += d2
    count++
end
print, sum1/count, sum2/count, sum3/count, sum4/count
end
```
