Hi all,

This is a simple question if you know the answer. :P

I'm trying to INTERPOLATE a matrix from the first row to the last top row. For example:

```
data=FLTARR(5,5)
data[*,0]=FINDGEN(5)
data[*,4]=6.
```

I want to INTERPOLATE the values data[\*,1:3] using the values data[\*,0] and data[\*,3].

I'm trying to do that using the INTERPOLATE function but I'm confused.

Can anybody help, me?

Thanks,

nata
