---

I'm trying to get a bad column out of an image by selecting the column and then setting all values equal to the mean of the image (probably not the best way to go about it, but I'm not very good at this). But I'm having trouble selecting the column. No matter what row or column number I put in, i.e. `array=[1440,*]`, and then set those values to the mean, it will only change the row on the top of the image. I'm probably missing something very simple or doing something very stupid, can anyone help?
