Hi, there

I want to get 'same value, same color' in different pictures so that I could make a comparison between the pictures.

for example, I get two pictures of a same location (picture A and B). the valid range for A and B are [m,n]. now I want to display A and B using same legend. if the values in A and B are same, they got the same color in the pictures.

How can I do this in IDL?

Thanks in advance.
