
Subject: CALL_EXTERNAL under Windows 95

Hi,

I'm trying to use CALL_EXTERNAL to use some function that are built into a 32 bit DLL in Windows 95. Although IDL seems to find the DLL, it keeps telling me that the "Entry" is not found. I assume the "Entry" is the name of the function you want to call. Does anyone have any experience with this? Are there are syntax mistakes that I could be making?

Example:

```
IDL> print, call_external("dasshl32.dll","DASTC_DevOpen",  
"C:\asodastc.cfg", 1)  
% CALL_EXTERNAL: Entry DASTC_DevOpen not found in DLL  
dasshl32.dll.  
% Execution halted at: $MAIN$
```

Thanks for any help!
