I probably should tell you how I solved this, although
God knows I could probably get rich if I kept it to
myself. Goes against my nature though, and, anyway,
I'm storing up karma for the next life. Maybe I can
be a Matlab expert. ;-)

What I did was I opened the TIFF file in Frank
Warmerdam's FW_TOOLS application and I looked to see
how he was interpreting the GeoTIFF structure.
If I hadn't insisted on IDL all the damn day, I
probably could have figured it out a bit sooner. :-(

Cheers,

David
