Subject: Re: Linux installation problems..
Posted by jdehls on Tue, 16 Jun 2009 23:09:10 GMT

I have had exactly the same problems today with a fresh install of
Ubuntu 9.04. This thread has helped a lot and I now have ENVI and IDL
working. However, I still get errors starting IDLDE. I have renamed
gio, installed the right java packages, made sure I don't have the
wrong ones installed, but I still get a popup with:

JVM terminated. Exit code=13
/usr/bin/java

followed by many other lines.

I was at a training course in Boulder recently and I am quite sure all
the Linux boxes were running Ubuntu. Any more suggestions Brandon?
