James -

I am using L1B data, and processing it myself to generate the lat,long, so2 dataset. The fact that there are many more data at the poles doesn't matter as I have averaged all values over a 0.25x0.25 grid, because I am trying to get a representation of the daily average.

Having played around with this extensively, I am, as David suggested, now steering clear of MAP_SET as none of the projections appear to plot the data in the right place. Thanks for your thoughts!

Helen
