I'm starting to seriously use IDLDOC. In several program headers I have text that I want to appear in the IDLDOC page exactly as it appears in the header. For example, I have a illustration of a directory tree that I wan to include:

```
;          path/specified/by/path +---- 2003 +---
2003_180_L1A_00_00_00_1.CSV
;          |          +---
2003_180_L1A_01_00_00_1.CSV
;          |          +---
2003_181_L1A_01_00_00_1.CSV
;          |          +---
2003_181_L1A_01_00_00_1.CSV
;          +---- 2004 +---
2004_180_L1A_00_00_00_1.CSV
;          |          +---
2004_182_L1A_01_00_00_1.CSV
;          |          +---
2004_183_L1A_01_00_00_1.CSV
;          |          +---
2004_184_L1A_01_00_00_1.CSV
;          +---- 2005
```

How do I induce IDLDOC to not remove all the blank space before the start of each line of text?

And thanks Michael Galloy for a terrific tool

Dave
