Hello,

I was wondering if there was a way of converting an integer array into binary?

For example, we have an integer array with the following:

test = [1,2,3]

If we convert this to a binary array, we should get:

0000000000000000100000000000000010000000000000000100, etc.

Is this possible in IDL?

Thanks,
Vikram
