**Subject: Can't copy from widget table: brainfart**

I know this is stupid, but it's late and I'm feeling particularly dumb
right now.

I have a widget_table and I just highlight the cells and hit "ctrl+C"
and try to paste it into any other program. FAIL. I swear I've figured
this out before but...well...tonight I'm not smart enough. A
widget_context menu would be nice too. I'm trying to resist using an
event and just want windows/MAC to copy my table for me to paste into
another program. I must be missing something simple: keyword or
accelerators etc.

Thanks for the help,
frank
