
Subject: "Program code area full", even when trying to exit!

Hi,

I'm pretty new to IDL, and mostly using it to run routines others have written right now. I'm running a code which plots data, in a way that I'm checking and comparing plots pretty often, so running the plot a few times a minute or so. Pretty often (a few times an hour, I'd say) I get a "Program code area full" error, and most of the time when it happens, I can't even exit IDL! I type in "exit" and get the exact same error.

This isn't an issue that other people using this routine have.

Any idea what could be going on?
