Hi everybody!
I have an easy question... Can I open a PostScript file to include a
new plot in it, without erasing the current information?
For example, I create a PostScript in a given routine, and later on, I
want to include a new plot -in the same PS file- in an other routine.
Thank you very much!
In IDL, no. In Linux, you can merge PS files with:
gs -dNOPAUSE -sDEVICE=pswrite -sOutputFile=out.ps file1.ps file2.ps ... -c quit regards, lajos
```
