Subject: Update PostScript Posted by Xavi Llort on Mon, 20 Jul 2009 16:18:17 GMT View Forum Message <> Reply to Message

Hi everybody!

I have an easy question... Can I open a PostScript file to include a new plot in it, without erasing the current information?

For example, I create a PostScript in a given routine, and later on, I want to include a new plot -in the same PS file- in an other routine.

Thank you very much!
