Currently, yes. But who knows. I can see this being
useful in my own work. In fact, I've already solved this
problem in my own work (using Histplot as the example),
but just not in a way that would be useful to
everyone.

It's a busy week, what with work, a big tennis tournament
that has me playing nearly every evening, my wife gone to
take care of her brother, etc. But, I'll see if I can come
up with something. :-)

Cheers,

David
