
Subject: Modis Conversion Toolkit Question

Folks (at ITTVIS, in particular),

I read in the IDL Code Contribution web page that the Modis Conversion Toolkit add-on for ENVI could read all known MODIS products. This was **great** news, because I have a MODIS product I didn't know exactly how to handle. It is MOD09GA, which contains corrected reflectances for Land Bands 1-7.

But, when I open the file up in the MCTK, it only reads the first 8 variables in the file, and doesn't reach the 7 bands I am really interested in.

Is this a limitation? A bug? A misunderstanding?
Is this a supported product that I can ask someone about?

Cheers,

David
