
Subject: [Q] Displaying outline of image with WCS

Hi,

I wondered if anyone has made a routine to plot the outline of several images in one RA-DEC plot.

I have several FITS images with WCS information in the header, and I would like to plot an outline of these images in a larger RA-Dec field to see how they cover the field.

It is probably possible to do this using XYAD or its relatives in the astronomy library, but I wondered if someone had done this before and maybe had some code or some advice.

Cheers,
Jarle.
