Subject: oplot with colours
Posted by b.a on Fri, 31 Jul 2009 03:29:58 GMT

Hi,

I am writing a program (using IDL workbench) and I have two questions
about plotting data. I appreciate if anyone can help.

1) In my program, I need to plot several data on the same draw window.
I know that oplot does this but even for the first curve, I don't want
to use plot. Is there anyway that I ignore having plot for the first
one and then using oplot?

2) For each curve, I want to have different colour and on the draw
window, I need to show that each colour represents which curve.

Thank you
Afra
