Subject: labeling time series with dates

I'm trying to either find or develop a set of IDL code that
will allow me to label time series plots with yyyymmdd type
labels. The routine would need to be generic enough so that
I could call it and have it produce labels for any specified
time interval, including weekly and monthly. This is a trickier
problem than might appear at first glance.

Any suggestions? I have already reviewed one set of routines
that do not perform as expected. Thanks for any help.

Chris
