Subject: Help from UNIX IDL 7.1 Users
Posted by David Fanning on Tue, 18 Aug 2009 23:17:19 GMT

Folks,

I am looking for someone running a UNIX version of
IDL 7.1 to confirm that the problem described in
this article dealing with Dialog_Pickfile has
been fixed.

  http://www.dfanning.com/fileio_tips/unixpickfile.html

Specifically, if you specify both a file name and
a path when you call Dialog_Pickfile, and then do
nothing else except hit the Accept button, the file name
that is returned has two paths appended to it and is
bogus.

I am interested in what is in the Selection box,
and what is returned.

I am, say we say, dubious. :-)

Thanks,

David
