You don't need a for loop here:

```
IDL> a = [1.2, 3.4, 5.6]
IDL> b = floor(a)
IDL> c = a-b
IDL> print,b
      1      3      5
IDL> print,c
 0.200000  0.400000  0.600000
```

Jean
