Humm. Good point.

It certainly is hard to imagine a standard that is
less a standard than netCDF files. (Perhaps the
netCDF conventions are not organized very well, or
are too hard to read, or are simply ignored by the
"seems right" crowd.)

When is that version of IDL coming out that can
read your mind and run what you *think* you are
writing instead of what you are *actually* writing!?
You know, the one that is the polar opposite of
Microsoft Word.

Cheers,

David
